To all our Mac friends...

MacPlay, established in 1993 as part of Interplay Productions, is a separate division devoted to the Macintosh. Our mission is to bring you quality Mac entertainment and educational products. We aim to always make maximum use of the Macintosh and all its unique features. Our games don’t break as soon as each new Mac is introduced, and in fact we are moving forward to take advantage of Apple’s hardware innovations such as speech recognition and the PowerPC.

Top artists, programmers, and musicians in the computer industry have established MacPlay as a producer of award-winning games and educational software. We will strive to continue as one of the leading innovative software publishers for the Macintosh.

So if you have a Mac, any Mac, welcome to MacPlay! And be sure to look for these other entertaining MacPlay titles.

There is a darkness over the battlefield. The wind sighs gently and there, in the distance, comes the flash of lightning and the rumble of thunder. With a sudden gust of wind, your warriors appear: the King, the Queen, two each of Bishops, Knights and Rooks, and before them all, a row of Pawns. Waiting, your King turns to you, ready to order his servants forward to their deaths in your battle to rule the field. Yet you hesitate. In that moment, you hear the clank of armor as the wind grows stronger, and somewhere nearby, there comes the sound of metal upon metal as one of your warriors draws his blade, impatient for the coming slaughter. Suddenly, the thunder crackles overhead and lightning flashes shadows upon the checkered board. The time has come. There can be no more delay. The storm is upon you, and so too the battle. You make your choice—a Pawn marches forward against the darkness opposing you. And here Battle Chess begins...

This manual includes the basic rules of chess, the movement patterns of each piece, some simple suggestions to help you win, and an explanation of the different phases of the game.

# Welcome

We at MacPlay thank you very much for purchasing *Battle Chess* Enhanced CD-ROM. We welcome your comments on all of our titles. If you would like to write to us, our address is:

MacPlay, 17922 Fitch Avenue, Irvine, CA 92714  
(714) 553-3530 — orders only (800) 736-5738

---

## For Your B&W or PowerBook™ Macintosh®

On your *Battle Chess* Enhanced CD-ROM you will find a black and white version of *Battle Chess*. This can be copied to your hard drive and will play on any black and white Macintosh or PowerBook. To install, copy the folder “Battle Chess B&W” to your hard disk from the CD-ROM.

---

## Installation

*Battle Chess* Enhanced CD-ROM can be run directly from the CD-ROM disc. Just double-click on the “Battle Chess” icon.

For a quicker response time, you can copy any or all of the files to your hard disk into a new folder. We suggest you name the folder “Battle Chess.” You should copy the *Battle Chess* application (the file with the neat icon) to this folder, and if you want to, you can also copy the two files that are located in the “Data” folder, named “BC data1” and “BC data2.” Make sure the three files are all in the same folder. This will take up about 33MB of space on your hard disk, but it will result in extremely fast loading time for walking and combat animation!

If your CD-ROM drive is an external drive, make sure you have hooked up headphones or speakers to the CD-ROM drive, since all the music, sound effects, tutorial sound, and combat effects are played directly from the CD-ROM drive.

*PowerBook is a trademark of Apple Computer, Inc.*
Battle Chess Installation

For the latest information about Battle Chess Enhanced CD-ROM, use TeachText to read the file “Read Me” on the CD-ROM. This file may contain information added since this manual was printed.

Requirements

- Any color Macintosh with a CD-ROM drive
- System 6.0.7 or later (works with any version of System 7)
- If using System 6, you need the “32-bit Quickdraw” INIT from your System 6 disks
- Monitor with 256 colors
- 2600k of free memory
- If your CD-ROM drive is an external unit, you need to hook it up to speakers so you can hear all the CD sound effects, music and tutorial sound. You can hook up portable headphones, powered speakers, or even your stereo system to hear all the sound of Battle Chess. Refer to your CD-ROM drive’s manual if you need help hooking up speakers.

Some Recommendations

- You can install some or all of the Battle Chess files on your hard disk to speed up disk loads. See “Hard Disk Installation” below.
- We recommend a 13” or larger color monitor (640 by 480 resolution or more). Battle Chess will work fine on Apple’s 12” monitor, but a smaller chess board will be used.
- We recommend System 7.0 or later.
- A faster CD-ROM drive will result in faster animation loads. Right now we like the 300K per second, “double-speed” CD-ROM drives that are becoming common.

Hard Disk Installation (recommended)

Copying some of the files from the Battle Chess CD to your hard disk will speed up your disk loads. Here’s how to copy the files.

1. From the Finder, make a new folder on your hard disk. Call it “Battle Chess CD-ROM.”
2. Drag the CD-ROM’s “Battle Chess” icon over to your new folder.

You may also copy the 33 megabytes of animation files to your hard disk. This will provide much faster disk loads whenever loading any of the animations for walking and combats. If you have about 33 megabytes available on your hard disk then do the following:

3. Open the CD’s “Data” folder. Drag the two files “BC data1” and “BC data2” from the “data” folder to your hard disk’s “Battle Chess” CD-ROM folder. The file copy may take a while!

How to Play Battle Chess directly from the CD-ROM

If you don’t want to copy any files at all to your hard disk, you can play by just double-clicking on the “Battle Chess” application icon. This will be slower; instead, we recommend that you copy the application to your hard disk before playing, and play using the copy on your hard disk instead of the copy on the CD-ROM.

Battle Chess Menus

If you are running Battle Chess on a 13” monitor or smaller, the menu bar will be invisible. To access the menus, just move the mouse pointer to the top of the screen as usual and the menus will appear.

Moving the Pieces

To move a piece, just click on the square on which the piece is standing. Then choose the piece’s destination by clicking on the square on which you want the piece to move. The destination square will flash if it is a legal move. If you choose a piece and then decide you want to move a different piece, just click again on the first piece’s square to deselect it. To castle, just move the King two squares to its destination; the rook will know what to do on its own.

Battle Chess Help and Tutorial

If you are running System 7.0 or later, you can use Balloon Help for all menu commands.

Battle Chess includes a complete chess tutorial on-line. Each piece will come out on the chess board, introduce themselves, talk about the history of the game, how the pieces move, and some strategy tips. If you want to see the complete tutorial, just select the first tutorial from the “Tutorial” menu and let all the pieces’ tutorials play through. To skip to a specific piece, choose that piece from the “Tutorial” menu.

For more reference material on playing chess, see page 12 of this manual. There is also a huge body of literature on chess to pursue, from beginners’ tutorials to entire books on the subtleties of the Sicilian Defense. Check with your local library.
Playing **Battle Chess** Enhanced CD-ROM

Movement

The white pieces (colored red in **Battle Chess**), move first. To move a piece, click on the square the piece stands on and then on the square you want to move to. If the destination square does not flash when you point to it, then the piece cannot legally move there. If you change your mind after clicking on a piece's square and you want to move a different piece, you can click again in the piece's square to un-select it and start over.

After the piece walks over to the square you select, it will be Black's turn. (In **Battle Chess**, the black pieces are colored blue.) If your opponent is a human, use the same technique to move the piece you wish. If your opponent is the computer, it will think for a few seconds (depending on the Level menu) and then move its chosen piece.

Play then alternates back and forth between White and Black until there is a checkmate or stalemate, ending the game.

Pawn Promotion

When a pawn reaches the eighth rank, a window will appear in the middle of the screen. Click on one of the pieces in this window to promote your pawn.

En Passant

To perform this uncommon move (as discussed in the manual on page 20), move your pawn to the square directly behind the enemy pawn. The pawns will know what to do after that.

Check

When your King is in check, the cursor will change to a “check” icon. It will change back to normal when the King escapes check.

Checkmate

When the King is in check and cannot escape, checkmate occurs, as discussed on page 23 and 24 of the manual. When this happens, the piece that forced the King into checkmate will automatically move and capture the King.

Move menu

Set up Board: Lets you set up the pieces on the board however you wish, to test strategies, play classic chess problems, or just give yourself another Queen if you're behind. You can move pieces around by first clicking on the piece you want to move, then moving the piece where you want it to go, and finally, clicking again to drop the piece there. To remove a piece, click on it, move it off the edge of the board, and drop it by clicking again. To add pieces, click on one of the pieces displayed on the side of the board, move it where you want to place it, and again to drop it onto the board.
When setting up the board, three menu options are available:

Clear Board: Remove all pieces from the board.
Restore Board: Return the board to the way it was before you changed anything.
Done: Ends the Set up Board session and returns to regular play.

Force Move: Stops the Mac from thinking and forces it to make the best move it has thought of so far. Use this option when the cursor indicates the computer is thinking, and you don’t want to wait for it to finish its turn.

Take Back: If you make a mistake, use this option to take back one move on one side, so you get another chance. You can Take Back up to 60 moves. (Take Back is the same as the “Undo” option in the Edit menu).

Replay: If you decide you liked a series of moves you just removed with Undo or Take Back, use this option to undo the series of Take Backs, one at a time. You can Replay as many moves as you have taken back.

Suggest Move: This option asks Battle Chess for a hint. Battle Chess will flash two squares, one for the piece it thinks you should move and the other for the destination. Be warned that Battle Chess suggests the move it would make if playing at Level 1; this move may not be the best move possible for your strategy.

2D Board/3D Board: Switches between the 2D board, which is a standard chess board without animation, and the 3D board, where the pieces move and fight with animation.

Human, Mac, Modem White: You can select only one of these options at a time. The selected option tells the computer who plays the White pieces.

Human, Mac, Modem Black: You can select only one of these options at a time. The selected option tells the computer who plays the Black pieces.

To watch Battle Chess play itself, set both colors to “Mac”. To play against a friend using the same Mac, set both colors to “Human.” To play against a friend on a different computer, see Step by Step Modem Play Instructions, below.

Allow Resign: If turned on, the computer will give up and resign if it sees it is in a hopeless position. If turned off, the computer will play to the bitter end — thus allowing you the satisfaction of finally checkmating the enemy King!

Level menu

Only one Level may be active at a time.

Novice: Sets the Mac to be at its easiest to beat. Novice level will take the shortest amount of time to think and will occasionally make some critical mistakes.

Levels 1 to 9: The higher the level, the more time the Mac will take to think. More time means that Battle Chess has more time to find a better move and will correspondingly play a better game of chess.

Set Time: If you wish, you can set Battle Chess to think for any amount of time. The number you enter will be the maximum amount of time Battle Chess will think, from 1 minute to 10,000 minutes. Battle Chess will move before this time limit is up.

Modem menu

Modem menu options are only available when one player is set to “Modem” in the “Settings” menu. For step-by-step modem instructions, see Step by Step Modem Play Instructions on page 10.
Dial Number: Dials a phone number by sending an “AT” command to your modem.

Hang Up: Hangs up your phone line. This will terminate a modem connection if one exists.

Set Auto Answer: Sets your modem to automatically answer the phone if someone calls you. This lets another Battle Chess player call you and connect.

Talk: Sends a message to your opponent, to share information or taunting.

Tutorial menu

Selecting one of these options will start the Battle Chess tutorial with that piece. If you’d like to see the entire tutorial (about 25 minutes long), select “King” and sit back with a beverage as each piece comes out in turn to teach you about chess, from the basics to some light strategy and history.

Step by Step Modem Play Instructions

You can play Battle Chess against a distant opponent if each of you has a Hayes-compatible modem. You can even play against a computer that isn’t a Macintosh, as long as the other computer is running Battle Chess. If your modem is properly connected to the Mac’s modem port, as shown in your modem manual, follow these steps to play a modem game.

1. Arrange with your opponent who will play Black, who will play White, who will call, and who will receive the call. Then, both of you should run Battle Chess. Use the “Modem plays White” or “Modem plays Black” menu option to set your opponent’s color. Hang up the phone on both ends before continuing.

2. One player must set his modem to answer the phone by picking the “Set Auto-Answer” option from the “Modem” menu.

3. The other player must call the player whose modem is set to “Auto-Answer.” To do this, pick the “Dial Number” option from the Modem menu, then type in the phone number you want to dial and click “OK”. If all goes well, the Mac will pick up the phone, dial the number, and connect with the answering computer.

At this point you can start your chess game. When you move a piece, the same piece will move on the computer on the other end. Note that after the two players are connected, the menu options New Game, Set up Board, and Open Game will send an entire new chess board to both sides, discarding the current game. The menu options Take Back and Replay are disabled.

When you set one player to Modem, you can send text to your opponent by typing Command-T or by choosing the Talk... option from the Modem menu and typing the text you want to send. When you press return, Battle Chess sends that text. When you receive text from your opponent, it will appear in a window on the screen. Pressing return clears this window.

When you are finished playing, you can break the connection and hang up the phone by choosing the Hang Up option from the Modem menu.

Playing over a serial cable

If both computers are at the same location, you can set up a direct connection between the two computers to play. Plug an Imagewriter printer cable or a null-modem cable between the modem ports of the two computers. Each player must then pick “Modem plays White” or “Modem plays Black.” You can then start playing without having to use the Modem menu.
Basics of Chess

The goal of playing a game of chess is identical to that of many other games: specifically, defeating your opponent. In chess, this is done by placing your opponent's King in checkmate. Every move you make should be for this goal and to prevent your opponent from doing the same to you!

The Basic Basics

Here are the rules of chess in a nutshell:

- Two opponents play against each other. One player is usually White and the other Black. In Battle Chess Enhanced CD-ROM, the White pieces are colored red, and the Black pieces are colored blue.
- Each player has one King, one Queen, two Rooks, two Bishops, two Knights, and eight Pawns.
- The object of chess is to checkmate your opponent's King.
- The White player always moves first and then the two players alternate moves. You must move when it is your turn.
- You may only move one piece per turn (with the exception of castling; see Castling). A move is when a piece moves from one square to another square. Each kind of piece moves in its own individual way, described in The Individual Pieces section.
- No piece (except the Knight) may jump over or pass through any other piece on the board when it moves. Only one piece can be on the same square at a time.
- Any piece may capture any of the opponent's pieces by landing on the same square with it. The captured piece is removed from the board and is out of the game. You may only capture one piece per turn.
- When an opponent's piece threatens the other player's King, meaning that piece could capture the King on the next move, the King is said to be in "check."
- If your King is in check, you have three options: One, you must move your King out of check; two, block the attack with another piece; or three, capture the piece putting your King in check. If you cannot escape check in any one of these ways, the King is in "checkmate," you lose, and the game is over.

The Pieces

In Battle Chess, your pieces will appear as in Figure 13. Read The Individual Pieces for their characteristics.

The Board

As you can see by looking at your screen, the chessboard consists of 64 alternating...
dark and light squares, 32 white and 32 black. For the purpose of this manual, the light squares and pieces will be referred to as white and the dark as black to match traditional chess notation. The squares are arranged in 8 rows and columns. When you start up Battle Chess, all the pieces are in their starting positions. All chess games start from this initial position.

**Movement**

In Chess, White always moves first. This means that the player controlling the White pieces moves one White piece for their first turn. The Black player moves next, also limited to one move for one piece. The actual game itself consists of the players making a series of alternating moves, one piece at a time. White first, then Black, then White, then Black, and so on until the end of the game. The only time that a player may move more than one piece per turn is during castling (see Castling), and this may occur only once per player per game.

**Movement Restrictions**

With the exception of the Knight, all chess pieces must move in straight lines. Some chess pieces may move on the rank, that is, in any straight line across the board (see Figure 15a). Other pieces may move on the file, that is, in any straight line up and down the board (see Figure 15b). And there are other pieces which move on the diagonal, or in any straight line of squares that meet only at one corner (see Figure 15c). Some pieces may move using a combination of these: on the rank, on the file and/or on the diagonal.

The only restriction on this movement is that you cannot move your pieces through or into a square already occupied by another one of your pieces. The exception to this restriction is the Knight, which can move through or over pieces, but cannot land in a square already occupied by a piece of his own color or the opposite color unless he intends to capture it. You can move a piece into a square already occupied by one of your opponent's pieces provided you have an open line of attack. This is your primary method for capturing an opponent's pieces. Specific methods of attack will be covered under each individual piece description.

**The Individual Pieces**

**The King**

The King is your most important piece. As noted above, once he is checkmated, the game is over. The two primary goals of your game, then, will be to protect your King from being checkmated and to put your opponent's King in checkmate instead. You will do this by
using a combination of defenses and attacks by your various pieces. Without them, your King is practically helpless.

With the exception of castling, your King can only move one square at a time in any one direction (see Figure 16). **Under no circumstance may your King move into check**, meaning your King may never move directly into an open line of **attack from an opposing player's piece**. If you did then you'd lose the game. This does not mean, however, that your King is completely defenseless. If there is an enemy piece directly adjacent to your King, you can use him to take that piece, provided that you're not moving him into check. This is the only way you can use your King to directly attack another piece. The King is not a piece intended to be used heavily in offense. In fact, it's fairly safe to say that if you're reduced to relying heavily on the King's offensive capability early in a game, things are getting pretty grim. Toward the end of a game, however, both sides have usually been reduced to a handful of pieces, and at this time the King's attacking power can be very useful. Generally speaking, you should strive toward successfully defending the King while carrying on your offense with the other pieces, and with this balance of power you'll have a much better chance at victory.

The Queen

Like your King, your Queen can move or attack in any straight line in any direction. Unlike your King, however, your Queen can move as many squares as she wants, provided there is an open path (see Movement Restrictions and Figure 17a). No other piece has such a wide range of movement, which makes the Queen your most powerful piece. Even so, don't be tempted to overuse or rely too heavily upon her. As you will see, a good game of chess is won using a combination of pieces, and overreliance on any one piece is an almost guaranteed path to defeat.

The Rook

Your Rooks (each side has two) are restricted to rank and file movements only (movement across the board or movement up and down the board). Like the Queen, either Rook can move from one side of the board to the other during a turn, again provided the rank and/or file is clear of obstructing pieces. Because of this movement capability, your Rooks are considered second only to your Queen in terms of power (see Figure 17b).
The Bishop

Your two Bishops are restricted to diagonal movement only. For instance, provided that you have an open path, you can move a Bishop from the lower left corner of the board to the upper right corner. Keep in mind both Bishops start on a color, one on black, one on white, and each Bishop must remain on that same color for the entire game. If you play as White, the Bishop on the left hand side of the board starts on a black square, and will always move on black squares (see Figure 18a).

The Knight

The Knight is your most unusual piece. Rather than moving in a straight line like all the other pieces, he moves in an L-shaped pattern. Also unlike all the other pieces, he can skip over any pieces in his way. Unlike checkers, however, this does not mean that he captures any of those pieces. If there is an opponent's piece on the square where the Knight lands, only that piece is captured. Although it should be fairly obvious, keep in mind that your Knights cannot land on a square already occupied by one of your own pieces (see Figures 18b-c and 19a).

The Pawn

The Pawn is your weakest piece, and as a result, the most expendable. This might be why you get eight of them. Pawns act as the footsoldiers or pikemen of your army, advancing slowly across the board, performing your initial attacks. They are usually the first to defend your side against your opponent's attack. Unlike any of your other pieces, the Pawns do not have the option of retreat. Pawns can only move forward, one square at a time.

The exception to one square at a time is on each Pawn's first move. It may, but is not required to, move forward two squares at that time. See Figure 19a for an illustration of Pawn movement. Each of your eight Pawns may do this once on each of their first moves.

Unlike the other pieces, the Pawn's attack pattern does not match its movement pattern. Rather, the Pawn may only attack one space at either diagonal ahead of it (see Figure 19b).

The Pawn may not attack ahead of itself. So the Pawn may never move into a square directly ahead if it's occupied by any other piece. Often two Pawns meet and are deadlocked until another piece captures one of the Pawns, or until one of the Pawns can capture a piece diagonally ahead.
En Passant

There is another method of attack that occurs in only one situation: when an enemy Pawn moves two squares forward, bypassing one of your attacking Pawns (this can only happen on the enemy Pawn's initial two-space move). On your following turn your bypassed Pawn has the option of capturing the opposing Pawn even though it is not at a diagonal from yours. Your Pawn merely advances diagonally by one square, moving into the square directly behind the enemy Pawn (as though the enemy Pawn only moved one square), and your opponent's Pawn is captured. This move is called en passant (a French term meaning "in passing").

It is not a required move. There may be times when you will not want to take your opponent's Pawn in this situation. If you do not take your opponent's Pawn at that time, you may not repeat en passant with that same enemy Pawn. En passant only occurs when an enemy Pawn advances two squares, an event which only occurs once per Pawn in any game. Three turns later, for example, you cannot follow through an en passant (see Figures 20a-c).

Promotion

Finally, if one of your Pawns manages to cross the entire board, upon reaching the opposite side of the board, your Pawn gets promoted to another piece (see Figures 21a-b). Your Pawn changes into a Queen, a Rook, a Bishop or a Knight (it's your choice as to which piece it becomes, but it must change into something.) Your Pawn may not remain a Pawn, nor may it become a King. If you somehow manage to move all eight Pawns to the other side of the board you could have nine Queens on the board: your original Queen, plus eight promoted Pawns (see Figures 21a-b).

The Individual Importance of Each Piece

By now, you should be getting a sense of the power of each piece. The Queen is your most powerful piece. The Rook is considered next in power, and the Bishop and Knight are both in third place. Although the Knight is limited in how many squares he can move in one turn, he can still use all 64 squares of the board. A Bishop, on the other hand, can use only 32 squares maximum (remember, a Bishop always stays on his starting color), and this trade-off between mobility and the potential number of squares that can be attacked ties these two pieces at third in power. However in the end game, two Bishops are favored against two Knights or one Bishop and one Knight. Last, of course, is the Pawn with its very limited mobility. But don't forget the Pawn is able to change into the most powerful piece if it can be moved completely across the board. As for the King, he is admittedly limited in power through most of the game, but as both
sides lose more pieces the King's limited power becomes more useful.

A way of remembering all of this is to think in terms of points: a Queen is worth about 9 points, a Rook about 5, a Bishop or Knight about 3, and a Pawn about 1. Keeping this in mind, you can see that you would come out well ahead in power if you were able to trade a Knight for a Queen. On the other hand, the exchange of a Knight for a Bishop is ordinarily a fair trade. Keep in mind again, that there will be times when you may want to trade a high value piece for one of much lower power. For instance, if by trading a Queen for a Pawn you can set up for checkmate in the next move, then it wouldn't really matter how many points you lose in the piece transaction.

All that ultimately matters in the game of chess is whether or not you win the game. Everything else, including points, is second.

**Castling**

Castling can occur only once per player per game. It is the only time a player may move two pieces during one turn, and the only time that a King may move more than one square during one turn. It is a powerful defensive move, and as a matter of good strategy, it is recommended that you castle fairly early in the game.

Castling can only occur when there is a clear path between your King and either of your Rooks. Provided you meet that and a couple of other restrictions, you may move your King two squares to the right or left, depending on which Rook you are using. That Rook is moved to the opposite side of the King. When you are finished castling, the Rook ends up closer to the center of the board which makes it more versatile, and your King is placed in an easier defended space (see Figures 22a-c).

**Check and Checkmate**

The terms *check* and *checkmate* have been used several times in this manual. Here, we will go into more detail.
There are three ways to escape check:
- The King may move out of the line of attack.
- Another piece may move and block the line of attack.
- The attacking piece may be captured.

You must escape check in one of these ways as soon as the King is in check. If you can't escape check the King is in checkmate and the game is over. A simple definition of checkmate: "An attack on the King which allows no possible escape."

You may never move the King into check, nor move another of your pieces so that an opened line of attack places your King in check. A piece preventing your King from being in check like this is called a pinned piece. These rules may be factors in blocking the King's escape from check so watch out for them. As stated earlier, one of your prime objectives is to avoid being placed in checkmate, while trying to place your opponent's King in checkmate.

See Figures 25a-c and 26a-c for several examples of check and checkmate:

25a The White Queen is checking the Black King. The Black King can move one square to the left or right to escape check, or move its Bishop between the King and Queen to block the attack.

25b The White Bishop is checking the Black King. The King can escape...
You should be able to see that every location on the board can be identified by a combination of rank and file. Since there are two names for each rank location, there are consequently two names for every square. Using abbreviations, each square on the board is identified as shown in Figure 27c. The top name in each

If you divide the chess board vertically right down the middle, you will notice that both Queens are to one side of the line, while the Kings are on the other. This is important for chess notation, since every piece on the King's side of the board is referred to as “King's piece” (i.e., King's Rook, King's Bishop, etc.) while every piece on the Queens' side is referred to as “Queen's piece” (see Figure 27a).

This also applies to Pawns (see Figure 27b). However it is not necessary to continually refer to Pawns using their full names. King's Rook Pawn can just be referred to as a Pawn during a move unless it is unclear precisely which Pawn you are using.

As for the files (the columns of squares on the board), keep in mind that they are named just like the pieces. The King's file is the file the King is located on, while the Queen's Knight file is the file that the Queen's Knight is located on at the start of the game. The ranks (the rows of squares across the board) each have two names, depending on whether you are looking at them from the Black or White side.

You should be able to see that every location on the board can be identified by a combination of rank and file. Since there are two names for each rank location, there are consequently two names for every square. Using abbreviations, each square on the board is identified as shown in Figure 27c. The top name in each
For White's first move, P-K4, the board looks like Figure 28. Black responds by doing exactly the same thing (P-K4) in Figure 29a.

In Figure 29b, White moves its King's Bishop to the 4th rank of the Queen's Bishop file (B-B4). Black's response to this is to move its King's Bishop to the 4th rank of its Queen's Bishop file (B-B4) in Figure 29c.

The next thing that White does is to move its Queen to the 5th rank of the King's Rook file. This is an important move because the Queen is now threatening two of Black's pieces. By attacking at a diagonal, the Queen can take Black's Bishop's Pawn on the next move or the Queen can take Black's King's Pawn (see Figure 30a). One of these attacks, the attack against the Black Bishop's Pawn, will lead to checkmate and the end of the game if Black fails to respond properly. The other attack will lead only to check because, after the Queen captures the King's Pawn, the Queen's line of attack against the King could be blocked by several Black pieces: the Queen, the King's Bishop, or the King's Knight.

Black responds to these two potential attacks by guarding the King's Pawn. As you can see by the notation, the “??” denotes a very bad move. The reason? Although the Knight is now guarding the King's Pawn, guaranteeing that the White Queen would be captured if it were to capture the Pawn, Black has failed to guard
against the more deadly attack: the White Queen's attack against the Bishop's Pawn. The board now looks like Figure 30b.

White finishes the game by moving the Queen to the 7th rank in the King's Bishop file and taking the Bishop's Pawn (see Figure 30c). This places the King in checkmate. Remember our definition of checkmate: the King is in check, cannot take the Queen without entering into check (notice that the Queen is guarded by its Bishop at B4), and cannot escape to any other unoccupied square that is not already under attack by the Queen. Also, the attacking Queen cannot be eliminated by any other piece, nor have its line of attack blocked.

There are several simple ways in which Black could have avoided checkmate. One is as simple as moving the Black Queen to King's Two (written as Q-K2) which would have simultaneously guarded both Pawns under attack and which would have ended the threat of check or checkmate by the White Queen (the reason, of course, is because the White Queen could then be taken by the Black Queen). Figure 31a shows this simple defense.

The other defenses against this attack should also be obvious. Try a few variations on this game, and you should see the alternatives. You now should have a basic understanding of the game of chess as well as a basic understanding of chess notation.

Now for some more detail...

---

The Three Phases of a Chess Game

Chess is said to have three phases: an opening game, a middle game, and an end game. We'll talk about each of them.

The Opening Game

The opening game can be defined as the portion of the game that occurs generally between the first move and the eighth to the fifteenth move. The point of the opening game is to organize and coordinate your pieces as quickly as possible in order to take maximum advantage of their power. If you're a beginner, this is where you are going to make most of your mistakes. The mistake made in the sample game Scholar's Mate, for instance, is fairly common. An even simpler variation of that game, which can be just as easily lost by a bad move, is appropriately called the Fool's Mate. This game is pictured in Figure 31b.

"Hence if the knowledge of the chess-master were built into a computer program we should not see master chess but something very much stronger... To capture in a formal descriptive scheme the game's delicate structure- it is here that future progress lies."

- Professor Donald Michie
"Programmers' Gambit" New Scientist, 1972
As you can see, the attack again relies heavily on early development of the Queen and on White's poor responses to that development. Keep in mind that the Fool's Mate and the Scholar's Mate are regarded as very amateur games—ordinarily, even a poor player will spot your attempt to play one of these games and will respond with an appropriate defense.

The Fool's Mate and Scholar's Mate are two games to avoid. There are plenty of better ways to start your chess game. In fact, there are 169.5 octillion (169,518,829,100,544,000,000,000,000,000) possible combinations of the first 10 moves. To avoid making the wrong opening moves, keep the following things in mind:

- Your first move should be a center Pawn (the Queen's Pawn or King's Pawn). Otherwise, do not move too many of the other Pawns and never forget that a Pawn cannot retreat once it goes forward.

- Avoid moving the same piece twice during the opening game. Remember, if the point of the opening game is to organize and coordinate your pieces as quickly as possible in order to take maximum advantage of their power, then wasting several moves on one piece isn't likely to assist this.

On the other hand, if by moving the same piece twice you have a chance to make a useful capture, or if you can take advantage of an opportunity created by a blunder on your opponent's part, then do it. The key thing to always remember is that winning is all that matters in chess. If, by breaking some of these general guidelines, you can still win, then by all means, ignore these suggestions. However, these guidelines will generally help you win.

- Move out your Knights and Bishops before you move out the Rooks and Queen. For best control of the board, try to move them toward the center of the board. From the center each piece will have greater control of the board around it. From the edge of the board, the area controlled by each piece is diminished.

- Initially, you should stay on your side of the board. This strategy was violated by the White Queen in the Fool's Mate and by the Black Queen in the Scholar's Mate. If you try these games against an experienced player, you will learn the hard way why it's not a good idea to violate this particular rule.

- Castle early in the game. This will give you a stronger defense. Move one of your Rooks to a better attack position, and allow your other pieces to concentrate on the offensive. It is also a good idea to castle on the King's side so you have less area to defend.

- Do not move your Queen out too early. It is unlikely you will be able to accomplish a Fool's Mate or Scholar's Mate, and it is far more likely that your opponent will concentrate all attacks on your Queen.

- Move your Rooks to K1 or Q1. If you have castled early, and if you opened with a center Pawn move, this will allow your Rooks a greater range of power than leaving them in either corner.

- Do not prematurely move your most powerful pieces into the center of the board. To do so invites attack against them by other pieces—for instance, to move your Queen out too early.
invites attack by weaker pieces, even Pawns. Likewise, if you move one of your Rooks out into the center of the board prematurely, you risk losing it to a Knight, Bishop or Pawn. If you keep these things in mind during your opening game, you will have a better chance at winning.

The Middle Game

This is the part of the game that follows your opening development (your opening attempts to maximize your power over the board) and that precedes the final battle to finish off your opponent. This is the phase of the game where the attack is critical. You want to be on the offensive here. As in the opening game, however, there are some general things to keep in mind during this phase:

- Try to get ahead in power or position. This is the portion of the game where you will concentrate on capturing pieces, particularly powerful pieces. Concentrate on attacking, gaining territory and points, decimating your enemy, and thereby advancing toward checkmate. Attack, but be certain you are not leaving holes in your defenses (remember, you should have already castled). Keep in mind that whoever is on the attack at this time is less likely to make an error than whoever is on the defensive. Attack!

- Be especially careful where you put your pieces. This may sound like ridiculously simple advice, but keep in mind that, during the opening game, the important center of the board is fairly open, still subject to control by either player. During the middle game, the center is generally cluttered with many of the squares guarded by one or more pieces, making each move more dangerous than in the opening game.

- Watch your opponent's moves. During the middle game, your enemy's moves will be used to decrease your numbers and increase their power just like you're trying to do. Always remember that your opponent is setting up for checkmate.

All of this will set you up for the end game.

The End Game

This is the portion of the game where, all things being equal, both sides will have relatively few pieces left on the board, the King may actually be part of an offensive strategy, and where a Pawn or two may even have crossed the board to become a Queen or another piece. Because you will have fewer pieces on the board, the pieces that remain will increase in importance. Now more than ever, use every piece to its full potential.

At the end of the game, your least powerful pieces are going to assume a new importance. Just the difference of a Pawn or two may decide the outcome of a game. Remember that once a Pawn crosses the board, it can be promoted to a Queen. The use of Pawns during the end game is a major end game strategy.

Some Important Pawn-Related, End Game Rules

- If you are two Pawns ahead of your opponent, winning the game is considered easy, assuming you make no major mistakes. This can even be said of the player who is only one Pawn ahead, but of course, the opposing player will target that Pawn once it tries to run for a promotion.

- Two of your Pawns in a row (one directly in front of the other) is a weak position. Likewise, a Pawn by itself is weak or, for that matter, so is a Pawn that is blocked from forward movement.

- If one or several of your Pawns are able to pass through your opponent's lines of defense, advance them as fast as you can toward the other side of the board (with the intent of promoting them to Queens).

- If you are one or two Pawns ahead of your opponent, and if you must make a choice between specific types of pieces to trade,
then trade your power pieces first (your Queen, Rooks, Knights, and Bishops), but not your Pawns.

- If you are one or two Pawns behind your opponent, and if you must make a choice between specific types of pieces to trade, then trade your Pawns, not your power pieces.

- If you are down to one Bishop, avoid putting your Pawns on squares that are the same color as your Bishop (that is, if you have a Bishop that moves only on white squares, don’t block the white squares with your Pawns).

- If you and your opponent trade away all your power pieces, don’t worry. When Pawns are the only pieces left you still have the potential of trading each Pawn for a Queen. In some ways, therefore, this is actually the easiest kind of game to win.

A Few Other End Rules with Other Pieces

By the end of the game your King will become a more powerful piece. Take advantage of his power; if you are going to use your King offensively, now is the time.

If you have two Bishops, and your opponent has only a Bishop and Knight, then you have the advantage. Following that line of thought, Bishops are generally better than Knights during the end game. So if you must trade power pieces, trade the Knights first.

Drawn Games: The Other Ending

As said earlier, the entire point of chess is winning. There is another possibility. If neither side wins, there is a tie game, called a draw.

There are several types of drawn games. These include:

- **Draw by Mutual Agreement:** This is when both players agree that a game is drawn.

- **Draw by Perpetual Check:** This occurs when one player continually puts the other player’s King in check (not checkmate) and the checked player has no alternative but to endlessly repeat the same moves to avoid check.

- **Draw by Stalemate:** For the purpose of explaining this, let’s look at it strictly from your point of view. Stalemate occurs when 1) it is your turn to move, 2) your King is not in check, and 3) your only remaining move is to move the King onto a square which would place him in check (which, of course, is illegal). Under these three conditions the game is a stalemate and drawn. No victory, no defeat either.

- **Draw by Insufficient Checkmating Material:** Simply, neither side has enough pieces left on the board to achieve checkmate. For example, White has a King, and Black has a only King and a Bishop.

- **Fifty Move Draw:** If fifty moves have been made on each side without a single capture or a single Pawn move, then the game should be considered drawn (for obvious reasons, this rarely happens).

- **Repeat Move Draw:** If a player repeats the exact same move for three continuous turns, then the game can be considered drawn.

Closing Comments

This manual covers only the basic moves and strategies of chess as well as basic chess notation. With these skills, you can now go to your local library or book store and find books that will go into much more detail than this manual; almost all of them will include records of the games of past and present chess masters. Since you now know how to read chess notation, you can study and learn from these books and from the games inside them. All of this is nothing without playing the game, so here in front of you is the battlefield: your chessboard. Your warriors stand ready, your training is finished, and there, the storm draws near. Battle Chess awaits you. Let the battle, and the legend, begin...

Your move.

*Chess skill does not make a man better, but it does make a mind better.*

CUSTOMER SERVICE

If you have any questions about this, or any other MacPlay product, you can reach our Customer Support/Technical Service Group at:

MacPlay 17922 Fitch Avenue Irvine, CA 92714 Attn: Customer Support (714) 553-3530
Monday through Friday. No hints will be given out from this number. Hints are available through the postal mail, or through one of the electronic services below.

Please have your system information available, or better yet, try to be at your computer. The more detailed information you can provide our support personnel, the better service we can provide you.

CUSTOMER SUPPORT

MacPlay is a division of Interplay Productions. Most MacPlay support services are listed under the parent company, Interplay.

If you have a modem, you can reach us at the following:

Interplay BBS: We have a 24-hour, 7-day a week multiline BBS available for customer questions, support and fixes. The number is 714-252-2822. Modem settings are 300-14.4k baud, V.32bis, V.42bis, 8-N-1. This is a free service.

America Online: You can E-mail Interplay Customer Support at INTERPLAY. To reach our Customer Support board in the Industry Connection, press CTRL-K for “Go To Keyword.” Then type INTERPLAY in the Keyword window. In addition to reading and leaving messages, you can download fixes and demos from the “Software Libraries.”

CompuServe: We are located in the Game Publishers B Forum, type GO GAMBPUB at any “!” prompt. Then select “Section 5” for MacPlay. You can leave technical support questions there. You can also download fixes and demos from Library 5 in GAMBPUB. The best place for game play hints about our games is in the GAMERS forum. If you are not already a CompuServe member, you can call CompuServe toll-free at 1-800-524-3388 and ask Representative #434 for a free introductory membership and a $15 usage credit. Besides technical support for MacPlay products, CompuServe offers many other services, including communications, reference libraries, hardware and software support, travel, games and much more.

GEnie: We are located in the Game RoundTable by Scorpia, type M805; at any “?” prompt. Then select “Category 13” for Interplay Productions. Fixes and demos are available in the libraries.

PRODIGY® Interactive Personal Service: We are located in the Software Connexion. Use Jump to “Software Connexion.” Select “The Publisher's Exchange.” You can also send mail directly to us. Our ID is “Play99B.”

National Videotex Network: You can reach us by typing “GO GAMESFORUM” or you can send mail to our account “INTERPLAY.” Demos and patches are available in the GAMESFORUM library. NVN features many online games, and other items of interest for gamers. For more information about NVN, you can call 1-800-336-9096.

Internet: You can reach MacPlay with “71333.1467@compuserve.com.” Many MacPlay demos and patches are available at Internet FTP sites.
